The method involves contacting a cell expressing the polypeptide or nucleic acid with an agent to modulate the level or activity of polypeptide, or level of nucleic acid molecule. The method is useful for modulating the level or activity of HKID-1 polypeptide or polynucleotide in a subject having or predisposed to having a disorder involving cancer. Modulating HKID-1 expression or activity is useful for therapeutic purposes, for treating cellular proliferative and/or differentiative disorders including cancer or haematopoietic neoplastic disorders e.g. Acute promyloid leukaemia (APML), Chronic myelogenous leukaemia (CML) and Waldenstrom's macroglobulinaemia (WM). This is the amino acid sequence of a human protein kinase phosphorylation site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Modulating levels or activity of HKID-1 polypeptides, a member of serine/threonine kinase superfamily, for treating cancer, by contacting cell expressing the polypeptide with a modulator of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 differentiative disorder; cancer; Acute promyeloid leukaemia; APML; Waldenstrom's macroglobulinaemia;

                                             with an amount of an agent effective to reduce TTK polypeptide activity of a cancerous cell (comprising: (i) detecting the activity of a CTTK polypeptide in the presence of a candidate agent (c) the activity of TTK polypeptide in the presence of a candidate agent (c) capent), identifying an agent that reduces TTK activity of TTK polypeptide activity in the absence of the candidate agent (c) contacting a cancerous cell displaying elevated expression of a TTK contacting a cancerous cell displaying elevated expression of a TTK contacting polymucleotide with a candidate agent; and (ii) comparing the prognosis of a cancerous disease other than ovarian cancer in a control more control comprising: (i) detecting expression of TTK encoding polymucleotide in a test cancer cell of a subject; and (ii) comparing a converse of expression of the polymucleotide in a test cancer cell of a subject; and (ii) comparing a concer cell with a level of expression of the polymucleotide in the test cancer cell with a level of expression of the polymucleotide in a control non-cancer cell is condicative to the level of expression in the control non-cancer cell is condicative of the prognosis of the cancerous disease). The methods are useful for detecting cancer (other than ovarian cancer cell is controling synchrhof cancerous cells, identifying an agent that reduces TTK covarian cancer. The methods are also useful for determining the ability of a subject to respond to a particular therapy e.g. as a basis of correcting the bursey. The present sequence represents a closely related correction to human TTK. in this case human TMM (not defined)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            non-cancer cell, where an increase in the expression level of TTK protein or nucleic acid in the test cell compared to that in the normal cell, indicates the presence of cancer other than ovarian cancer. Also included are reducing growth of a cancerous cell (by contacting a cancerous cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        a subject, comprising comparing the expression levels of tyrosine threonine kinase (TTK, a mitotic checkpoint gene) polypeptide or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Detecting cancer in a subject, by comparing expression levels of tyrosine threonine kinase polypeptide or polynuclectide in a subject cell and a normal cell, where an increase in the expression level in the test cell is indicative of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; tyrosine threonine kinase; mitotic checkpoint gene; PIM1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human PIM1 protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches
The present sequence is the protein sequence of the human serine/threonine protein kinase and proto-oncogene, PIM-1. PIM-1 protein are the paralogues of novel human and murine PIM-3 proteins (see ABR6293 and ABR6293) of the invention, which are therefore expected to be and ABR62933) of the invention, which are therefore expected to be a livolved in cancer and cell growth regulation. PIM-3 is also involved in the development of insulin resistance and type 2 diabetes mellitus. The invention relates to the use of PIM-3 nucleic acids and proteins in: screening assays for compounds that modulate insulin resistance or type
                                                                                                                                                                                                                                                                               New human or murine PIM-3 DNAs or polypeptides, useful for agent for identifying anti-type 2 diabetes mellitus drugs, treating insulin resistance or type 2 diabetes mellitus.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC claimed are a vector, a method for identifying a nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence CC which is differentially regulated in an animal subjected to pain and a CC kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC subjected to pain, a method for identifying a compound which regulates CC the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates CC compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound or small molecule that regulates the cc polynucleotides, a method for identifying a compound useful in treating CC pain and a pharmaceutical composition comprising the one or more of the polypeptides or their antibodies. The polynucleotide or the compound that cc pain (e.g. spinal segmental nerve injury (Chung), chronic constriction conjury. (CCI) and spared nerve injury (CNI) in an animal (e.g. gene CC the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed CC ftb, who, but was obtained in electronic form directly from WIPO at CC ftb, who, in the patent of the specification which is differentially expressed during pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method for identifying a ligand (I), which binds to an inactive conformation of target protein kinase (T). The method involves contacting inactive conformation of (T), which contains or is modified to contain a reactive group at or near a binding site of interest, with one or more ligand candidates capable of covalently bonding to the reactive group thus forming a kinase-(L) conjugate (C). The method is useful for identifying protein kinase inhibitors that preferentially bind to inactive conformation of a target protein kinase. The present sequence is a protein kinase which may be modified via an amino acid substitution, for use in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 313 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Identifying ligand binding to inactive conformation of target protein kinase (T) comprises contacting the conformation modified (T) which contains reactive group at binding site, with ligands and detecting kinase-ligand conjugate formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; protein kinase; enzyme; inhibitor; PIM1.

The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy, Guillain Barre syndrome and chronic inflammatory demyelinating of the polyneuropathy. This sequence represents a human PRO polypeptide of the

                                                                                                                                                                                                                                                                                                                                                                                          The present invention relates to a method of designing a ligand binding to a target molecule. The method involves identifying as molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesising ligand. The invention is useful for designing drug products and for designing ligand binding to target molecules such as nuclear hormone receptors, TNP receptors, G-protein coupled receptors, methyl transferases, ligases, etc. The present sequence is the human PIM 1 protein. This sequence is used to illustrate the method of invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Designing a ligand binding to a target molecule, comprises identifying molecular scaffolds compounds binding to members of a molecular family, detecting orientation of scaffolds at a binding site of target, and synthesizing ligand.
                                                                                                                                                                                                                                                                                                                                           Sequence

The method involves the use of a serine/threonine kinase Pim-1, its partial peptide or its salt. Also disclosed is a kit for carrying out the method of the invention. The method is a wesful for screening a prophylactic-therapeutic agent for cancer. The method is also useful for prophylactis and/or treatment of cancer, inducing apoptosis, treating a patient having a solid tumour that is resistant to an anticancer agent (induced by hypoxia), and for screening a substance that promotes or inhibits the activity of serine/threonine kinase Pim-1. The present sequence represents a human polypeptide relating to the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 313 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       enhancer of anticancer agent, comprises use of serine/threonine kinase Pim-1, its partial peptide or its salt.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Disclosure; SEQ ID NO 1; 93pp; Japanese.

```
A;Gene: Pim-2
A;Map position: X
A;Start codon: CTG
A;Note: locus between A-raf and Act-7, near Kv4.1
C;Function:
A;Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threoning;Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threoning;Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threoning;Description: protein kinase forming protein; protein kinase homology
C;Keywords: alternative initiators; ATP; autophosphorylation; phosphoprotein; phosphotraf;89-345/Domain: protein kinase homology <KIN>
F;89-345/Domain: protein kinase ATP-binding motif
F;97-105/Region: protein kinase ATP-binding motif
F;120/Active site: Lys #status predicted
                                                                                       hypothetical protein F45H7.4 - Caenorhabditis C;Species: Caenorhabditis elegans C;Date: 15-Oct-1999 #sequence_revision 15-Oct-C;Accession: T22255 # R;Percy, C.
submitted to the EMBL Data A; Reference number: Z19538 A; Accession: T2255 A; Status: preliminary; tran A; Molecule type: DNA

Fuh. acquence of the felline pim-1 oncogene.

I CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosph
II CATALYTIC ACTIVITY: ATP + a protein duclear (By similarity).

I SUBCELLULAR LOCATION: Cyroplasmic and nuclear (By si
II PTM: Autophosphorylated (By similarity).

I SIMILARITY: Belongs to the Ser/Thr protein kinase fa
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         PIM1_FELCA

-i- FUNCTION: Thought to play a role in signal transduction in cells. May affect the structure or silencing of chromatin b phosphorylating HP1 gamma/CBX3.

-i- CATALYTIC ACTIVITY: ATP + a protein = ADP + a phosphoprotei - SUBUNIT: Binds to RP9 (By similarity).

-i- SUBCELLULAR LOCATION: Cytoplasmic and nuclear.
-i- TISSUE SPECIFICITY: Expressed primarily in cells of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              MEDLINE=20130009; PubMed=10664448; DOI=
